## HOW TO USE THE PRODUCT SPECIFICATIONS CATALOG

### UNDERSTANDING THE CABINETRY ITEM NUMBERS

#### WALL CABINETS

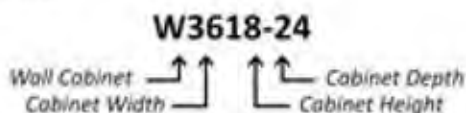

Example:

The wall cabinet width is always listed first and height is always the last two numbers. Thus 09 is the width and 42 is the height.

Since most wall cabinets are 09" deep we only list the cabinet depth when it is not 09" as in the following example.

Example:

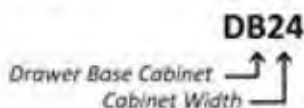

The depth of the cabinet is 24" and note this number follows the width (36) and the height (18). When the depth is not 12" it will always be the last two numbers.

#### BASE CABINETS

Base cabinets are simpler than wall cabinets because the height (34 1/2" plus 1 1/2 for the countertop) and the depth (24") are always the same unless otherwise noted. Thus the only numbers you need to know are the width.

Example:

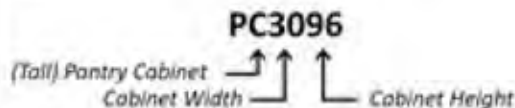

The 24 represents the width

With base cabinets a number may follow the cabinet numbers..

#### TALL CABINETS

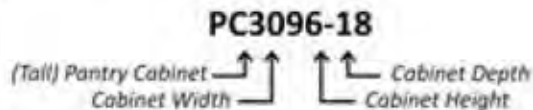

Example:

The tall cabinet width is always listed first and height is always the last two numbers. Thus 30 is the width and 96 is the height.

Since most tall cabinets are 24" deep we only list the cabinet depth when it is not 24" as in the following example.

Example:

The depth of the cabinet is 18" and note this number follows the width (30) and the height (96). When the depth is not 24" it will always be the last two numbers.
